Clinical Surveillance

Infection Control Designed Around Your Requirements

Vecna's Clinical Surveillance Platform delivers actionable infection control information to streamline reporting requirements. The platform employs a comprehensive series of validated clinical data processing modules empowering users to advance the safety and health of their healthcare organization. The user-friendly application also includes dynamic features to address every aspect of your organization's infection surveillance and prevention efforts with one comprehensive solution.

42%
Decline in rate of infections

25%
Reduction in surgery-related infections

300%
Increase in surveillance capabilities

☑ NHSN Data Validaton

Built-in data validation technology eliminates NHSN data submission errors lowering staff review requirements.

☑ Unmatched Data Integration

We are a data-integration company which enables us to rapidly and smoothly deliver our platform.

☑ Pre-Configured Reports and Alerts

Flexibility built into our platform enables users to build detailed and summary data reports. Data reporting monitors trends over time and provides active alerting.

☑ Personalized Views

Our platform allows all users to easily create and maintain specific views to rapidly access vital data.

☑ Public Health Reporting

Make the job easier for your staff. Vecna generates the metrics required for monthly NHSN submission eliminating manual errors.

☑ Pharmacy Solutions

Anticipate and prevent drug-bug mismatches, restricted drug use, drug-drug interactions, duplicate therapy, adverse drug events, days of therapy and IV-PO conversion.
